

TRUMENBA (Meningococcal Group B Vaccine) Doctor Discussion Guide

Discuss meningococcal group B disease (MenB) vaccination with your doctor

Start the conversation about MenB with these questions

Talking with your teen's health care provider about MenB is the best way to understand the risks and to decide whether vaccination with TRUMENBA is right for your teen. To ensure you have a thorough and informative conversation, print out this sheet and answer the questions below. Keep them in mind when you talk with your teen's health care provider.

Questions to discuss with your teen's health care provider

- If my teen already received a vaccination for meningitis, do they need TRUMENBA, too?
- What is the best age to vaccinate my teen with TRUMENBA?
- My teen is getting ready to go to camp or college. Should they be vaccinated with TRUMENBA?
- What are the possible side effects of TRUMENBA?
- How many doses of TRUMENBA are required?
- When should my teen return for their next dose, and can I schedule that visit today?
- Can TRUMENBA be given with other vaccines?

INDICATION

- Trumenba is a vaccine indicated for individuals 10 through 25 years of age for active immunization to prevent invasive disease caused by *Neisseria meningitidis* group B
- Vaccination with Trumenba may not protect all vaccine recipients against *N meningitidis* group B infections
- Fainting can occur in association with administration of injectable vaccines, including Trumenba
- The most common adverse reactions in adolescents and young adults were pain at injection site, fatigue, headache, and muscle pain
- Data are not available on the safety and effectiveness of using Trumenba and other meningococcal group B vaccines interchangeably to complete the vaccination series
- Tell your health care provider if you are pregnant, or plan to become pregnant
- Ask your health care provider about the risks and benefits of Trumenba. Only a health care provider can decide if Trumenba is right for you or your child

IMPORTANT SAFETY INFORMATION

- Trumenba should not be given to anyone with a history of a severe allergic reaction to any component of Trumenba
- Some individuals with weakened immune systems may have a reduced immune response
- Persons with certain complement deficiencies and persons receiving treatments such as Soliris® (eculizumab), are at increased risk for invasive disease caused by *Neisseria meningitidis* group B even with receipt of vaccination with Trumenba

You are encouraged to report negative side effects of vaccines to the US Food and Drug Administration (FDA) and the Centers for Disease Control and Prevention (CDC). Visit www.vaers.hhs.gov or call 1-800-822-7967.

Call 1-844-TRUMENBA (878-6362), 9 AM to 7 PM ET, Monday through Friday, for more information.
